

COFFEE TALK RECAP

August 20th, 2026 | Falcon 10X Update

Featured Speaker

Don Pointer
Dassault Falcon Jet

Key Takeaways

- The Falcon 10X is the largest aircraft ever developed by Dassault Aviation, offering greater cabin volume than its closest competitors.
- Its speed and efficiency are supported by military-inspired engineering influenced by Dassault Aviation's Rafale fighter program.
- A next-generation Digital Flight Control System is designed to improve safety and reduce pilot workload through trajectory-based controls, smart throttles, and recovery modes.
- The 10X will be the first business jet to feature a carbon-fiber wing.
- The aircraft is powered by Rolls-Royce Pearl 10X turbofan engines, marking the first Rolls-Royce-powered Dassault business jet.
- The cabin is designed around flexibility, with three- or four-zone configurations that can include dedicated dining, entertainment, sleeping, and private suites.
